

VersaRate®

(Patent pending)

adjustable flow rate infusion set

VersaRate® is a flow control device that was designed in response to patient and clinician requests to add flexibility to therapies that require flow rate variations during various infusion clinical settings.

Features

- Variable flow rates with an easy to use dial.
- Compatible with gravity infusion sets, mechanical and elastomeric infusion pumps.
- Large dial numbers to simplify use.
- Flow stability in a given position.

Benefits

- VersaRate® flow controller enables the patient to adjust the rate of infusion as dynamic conditions of the therapy require.
- Cost effective.

Advantages

- VersaRate® can be used to improve functionality of non-electronic infusion pumps.
- When used in conjunction with mechanical and elastomeric devices VersaRate® may replace rate control sets.
- VersaRate® enhances therapy adjustability in home and clinical settings without priming new sets.
- The VersaRate® dial is calibrated to correlate with flow rate data for specific pharmaceutical products.
- Flow rate charts are available for specific applications.
